WORKING AT AMSTELVEEN

with **Emma Fabreguette** - *Technology Risk Consultant*

My name is Emma Fabreguette, and I am currently Senior Technology Risk Consultant. My expertise is concentrated in industries with high exposure to cyber risk, including financial services and aviation. Some of my activities include performing cyber and technology risk reviews, issue management, or liaising with different audit engagements

What has your career journey been like, and how did you end up in your most recent job?

After a brief stint working as CRM product owner and manager in Commercial property, I was eager for a change and wanted to apply my education in Cyber Security professionally. I found Amstelveen through a LinkedIn ad, did some research in the team and the work that they did and decided to apply to their graduate program. Within 48 hours I had already been contact by the team and the interview process was underway. From the moment I met the team I knew that this is where I wanted to work, everyone was so passionate and inspiring

Why did you want to work for Amstelveen?

The people. Since I went through my first interviews, I knew that I loved the team culture and that everyone was very passionate and driven. I sensed that it was a very supportive network who each wanted to see each other succeed.

What does the day in the life of a consultant look like?

It's a good question and unfortunately one that does have a clear answer, so I'll just tell you what my day looks like. Depending on the day, I will either work

from home, from the Amstelveen office or at the client's office. I usually start my day with a coffee with some colleagues and then will have a series of meetings with stakeholders, work through tasks and projects, and if it's a Thursday/Friday, get together with the team in the afternoon for a drink/ catch up. I love the flexibility consulting provides, as well as the team culture we have.

What are the top skills needed in your industry?

I would say being curious and open minded is number #1, technical skills and knowledge come with time and experience and can all be learnt, but a good attitude and outlook on work is what will ultimately push you to success.

What is one thing you wish you had known before entering the workforce?

Embrace imposter syndrome, we are all trying to figure out and let your uncertainty be the driver for you to learn and grow.

Do you have any advice for those who want to apply for the graduate program?

Don't be a stranger! Connect with the team on LinkedIn, reach out if you want to learn more (ill never turn down a coffee catch up!) and be yourself. At the end of the day, we want to get to know who YOU are. You have nothing to lose in sending your application, and who knows, you might end up being part of an amazing team doing amazing work
